

TENNESSEE CENTER FOR
REPRODUCTIVE ACUPUNCTURE

Frozen Embryo Transfer Acupuncture Protocol

Preconception: It is optimal to receive treatments 1 time per week during the 1-2 months prior to beginning an IVF cycle.

- Regulate hormones
- Reduce stress
- Improve blood flow to the uterus

Stimulation: Treatments twice weekly concurrent to taking estrogen medication(s) can help:

- Improve blood flow to uterus
- Reduce stress
- Decrease side effects of medications
- Increase thickness and quality of the uterine lining

Day of Transfer: Two treatments within 24 hours before and after embryo transfer can help:

- Decrease uterine contractions
- Support implantation rates
- Reduce stress

Implantation: One treatment 5-7 days post transfer can help:

- Decrease uterine contractions
- Support implantation rates
- Reduce stress
- Support early pregnancy

Please call the office or email as soon as you know your transfer time and date.
